

Global Power (NYSE: GLPW) Energy Services segment (Williams Industrial and Hetsco) begins work to provide EPC services for UET Midstream for a terminal in the Colorado, Niobrara Shale region. Pond & Company was selected to provide the Engineering Services.

This project will construct a greenfield terminal for receipt and storage of Niobrara shale condensate. The current target for build-out of onsite storage is 300,000bbl. Receipt will be primarily by a single pipeline, with additional truck rack receipt. The truck rack will be constructed to allow ten bays of truck unloading, with five bays also usable for truck loading. Product stored in the tankage will be delivered to an adjacent wholesale pipeline via pipeline pumps and LACT metering units.
